

Centennial Bridge Improvement Project

Construction anticipated to begin in mid-2022 and conclude in 2024.

UC Berkeley will collaborate with local governments and public agencies, including the cities of Berkeley and Oakland, police and fire agencies, LBNL, and public utility providers, to ensure local access requirements are accommodated during construction. The university and its contractor plan to implement a traffic management plan that maintains the flow of traffic during construction; this plan is being prepared and will be shared with the community later in 2021.
